Sterilization in Autoclave:

- 1. After having carefully washed dried and oiled instruments, place instruments that can be opened in the open position; put these instruments in sterilization packets and place them in appropriate trays.*
- 2. Be careful not to overload autoclave. When an autoclave is too full it's possible that proper sterilization has not taken place.*
- 3. After the sterilization cycle has taken place, follow the manufacturer's suggestions for the drying cycle.*

Cold Sterilization:

When using a solution for sterilizing instruments careful attention must be made to the solution that kills specific bacteria and viruses. Many solutions have no effect on bacteria or viruses when in the presence of blood; also many solutions are very corrosive on the instruments, most solutions recommend a soak time of 10 hrs. Because of the long soak time the chemical action can damage the instrument. Reduce when possible soak time; where indicated use a corrosion inhibitor.

Schere für die Rektumchirurgie. Die stumpfe Form erleichtert das Präparieren in der richtigen Schicht, wodurch das präsakrale Nervengeflecht besser geschont werden kann.

Scissors for rectal surgery. The blunt shape facilitates the preparation of the correct layer, so that the presacral neuroplexus can be better preserved.

Tijera para la cirugía del recto. La forma roma facilita la preparación en la película precisa, por la cual se puede preservar mejor el neuroplexo presacral.

Ciseaux pour la chirurgie rectale. Sa forme émoussée facilite la dissection dans la bonne épaisseur et permet ainsi de mieux ménager le plexus pré-sacré.

Forbici per la chirurgia rettale. La forma smussata permette un facile incanalamento durante la dissezione senza ledere e meglio proteggendo il plesso nervoso sacrale.

Mit der atraumatischen Riefung am vorderen Maulende wird feines Gewebe schonend und sicher gefaßt, während mit den dahinterliegenden Hartmetalleinlagen eine Wundnadel sicher gehalten werden kann.

With the atraumatic serration at the tips, fine tissues are held gently and in a secure way. The tungsten carbide inserts provide safe gripping of needle.

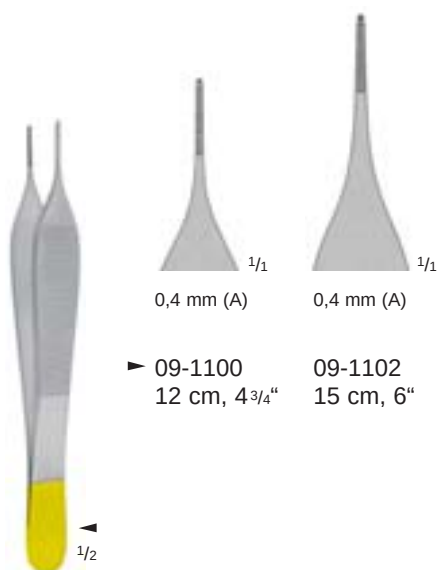

Con la estradadura atraumatica en la parte delantera de la boca, se sujeta cuidadoso y seguro tejido fino, mientras que con las capas intermedias de carburo tungsteno detrás se puede sujetar seguro una aguja.

Avec la striure atraumatique à l'extrémité des mors, les tissus fins sont saisis d'une manière délicate et ferme. Les mors en tungstène assurent une très bonne tenue de l'aiguille.

La pinza si presenta con una scanalatura atraumatica all'estremità anteriore. Ha la capacità di afferrare un tessuto in modo delicato e sicuro ed inoltre le sue estremità a morsi in carburo di tungsteno consentono di tenere fermo un ago da sutura.

Der Einsatz der Spezialklemme nach DEVIN in der Karotis-Chirurgie ist sehr vorteilhaft, da das Instrument nicht in das Operationsfeld hineinragt und bei der Arteriotomie ein freies Gesichtsfeld gewährleistet ist.

The special DEVIN clamp offers numerous advantages for carotid surgery. Its use ensures that the area in which the arteriotomy is performed is not obstructed by any instrument in front of or behind the operating area.

La utilización de la pinza especial DEVIN en la cirugía de la carótida ofrece grandes ventajas; de este modo no hay ningún instrumento que cruce (tanto adelante que atrás) la región de la arteriotomía.

L'utilisation du clamp spécial de DEVIN est très avantageuse pour la chirurgie carotidienne, car ainsi il n'y a pas d'instrument qui croise (par devant ou par derrière) la région de l'artériotomie.

La pinza DEVIN offre numerosi vantaggi nella chirurgia della carotide. Il suo impiego assicura che nell'area ove viene eseguita l'arteriotomia il campo non sia ostruito (davanti e dietro).

Die Spezialklemme ermöglicht ein den anatomischen Verhältnissen angepaßtes Anlegen an der Vena cava inferior oberhalb der Leber. Die Verriegelung am oberen Ende des Maules hält nach dem Anlegen der Klemme die Maulteile fest zusammen und verhindert somit ein Ausschlüpfen der mit dem Zwerchfell abgeklemmten Vena cava inferior.

The special clamp makes it possible to clamp the vena cava inferior above the liver according to the anatomic conditions. The lock at the upper end of the jaws fixes firmly the parts of the jaws of the clamp after it is placed, thus impeding the vena cava inferior - clamped together with diaphragm - from slipping out.

Se facilita la colocación amoldada de la vena cava inferior sobre el hígado, por causa de la forma anatómica de la pinza clamp especial. El cierre a la punta de la mandíbula sujeta firmemente la pinza clamp y evita que se escape la vena cava inferior con el diafragma.

Le clamp spécial permet un clampage atraumatique de la Veine Cave inférieure au-dessus du foie, adapté aux conditions anatomiques. L'anneau terminal permet de maintenir les mors joints évitant ainsi le glissement de la Veine Cave supérieure clampée avec le diaphragme.

La pinza permette di clampare la Vena Cava inferiore sopra il fegato data la sua forma anatomica. Il fermo nella parte superiore blocca saldamente le estremità della pinza impedendo che la Vena Cava inferiore scivoli via.

Sega oscillante

42-0351 110 V / 50 Hz

42-0350 220 V / 50 Hz

Die oscillierende Gipssäge wird mit 2 rostfreien Sägeblättern $\varnothing$ 50 + 65 mm (42-0356 + 42-0357) sowie 2 Schraubenschlüssel (42-0355), zum Auswechseln der Sägeblätter geliefert. Als Sonderzubehör für Hartverbände (z. B. Glasfaser etc.) sind 2 spezialgehärtete Sägeblätter $\varnothing$ 50 + 65 mm (42-0358 + 42-0359) lieferbar. Es sollten keine ungepolsterten Gipsverbände aufgeschnitten werden, da durch Mitschwingen der angeklebten Haut am Gips Verletzungsgefahr für die Haut besteht. Für die Normalbenutzung sollte das kleine Sägeblatt mit $\varnothing$ 50 mm verwendet werden. Das große Sägeblatt mit $\varnothing$ 65 mm nur in Ausnahmefällen (z. B. bei dickem Gips etc.) verwenden. Das Gerät ist wartungsfrei, sollte jedoch alle 1 bis 2 Jahre vom Hersteller überprüft werden. Die Gipssäge ist mit einem Sicherheitsschutz-Schalter ausgerüstet. Dieser gewährleistet eine Überbelastung des Motors. Sollte durch Überbelastung die Gipssäge aussetzen, kann diese innerhalb weniger Minuten mittels eines Spezial-Einschalt-Knopfes wieder in Betrieb genommen werden. Dieser Einschalt-Knopf befindet sich unterhalb der Motor-Kabelzuführung. Um eine zu hohe Erwärmung zu vermeiden, empfehlen wir stumpfe und abgenutzte Sägeblätter auszuwechseln. Zur Auswechslung abgenutzter Sägeblätter sollten ausschließlich die mitgelieferten Schraubenschlüssel verwendet werden. Sie vermeiden dadurch ein Überdrehen des Extenters. In regelmäßigen Abständen sollte das rostfreie Kühl-Draht-Gitter gereinigt werden. In explosionsgefährdeten Bereichen darf die Gipssäge nicht verwendet werden. **Technische Daten:** Leistungsaufnahme 90 Watt • Schutzklasse II nach VDE 0740 • Schutzisoliert • Funkentstört • Motorschutzschalter • Gewicht 1500 g.

The oscillating plaster-saw is supplied with 2 stainless steel sawblades with diameters of 50 + 65 mm (42-0356 + 42-0357) plus 2 spanners (42-0355) to exchange the sawblades. As a special requisite for hard bandage (e. g. glass-fibre etc.) 2 specially hardened sawblades diameters 50 + 65 mm (42-0358 + 42-0359) are available. Normally, the small sawblade with diameter 50 mm is used. The large sawblade with diameter 65 mm is used in exceptional cases (e.g. by thick plaster etc.). The unit is maintenance-free, but should however be checked every 1 to 2 years by the manufacturers. The plaster-saw is equipped with a safety-protective switch. This guarantees the motor against overloading. Should the plaster-saw become unfunctionable due to overloading the unit can be put into use again within minutes by use of a special switch-on button. The switch-on button is located underneath the motor-cable inlet. To prevent excessive heating we recommend rechanging of blunt and used sawblades. Replacement of used sawblades should only be undertaken with the use of the supplied spanners. This will prevent over-winding. The stainless steel cool-element-grid should be cleaned at regular intervals. The plaster-saw should not be used in explosive danger areas. **Technical Data:** Input 90 watt • Protection class II acc. to VDE 0740 • Protective insulated • Anti-signal interference • Motor-safety switch • Weight 1500 g.

La sierra oscilatoria para escayolas se entrega con dos hojas $\varnothing$ 50 + 65 mm (42-0356 + 42-0357) para serrar y con dos llaves de tuerca especiales (42-0355) para cambiar las hojas de sierra. Para serrar objetos o escayolas de gran resistencia, como fibra de vidrio, disponemos de dos hojas de sierra especialmente templadas $\varnothing$ 50 + 65 mm (42-0358 + 42-0359). No se debe nunca serrar ninguna escayola sin haber sido antes debidamente protegida, pues por la vibración, podrían ocasionarse heridas en la piel pegada a la escayola. Para el uso corriente se emplea la hoja de sierra de $\varnothing$ 50 mm. La hoja de $\varnothing$ 65 mm se usa en casos excepcionales, p.e. cuando la escayola es demasiado gruesa etc.. La sierra oscilante, no exige ningún cuidado especial; debe ser, sin embargo, controlada por el constructor cada año o dos. Esta equipada con un interruptor de seguridad. Dicho interruptor evita el recalentamiento excesivo del motor. En el caso que, por recalentamiento excesivo, se parase el motor, éste podría ser puesto nuevamente en función dentro de pocos minutos, articulando un interruptor especial que se encuentra junto a la salida del cable del motor. Para evitar que se recaliente, se aconseja cambiar las hojas de sierra que no estén en buen estado. Para cambiar las hojas de sierra usadas, debe emplearse únicamente la llave especial que acompaña la sierra. De vez en cuando debe limpiarse la rejilla inoxidable de refrigeración. En lugares, en los cuales exista peligro de explosión, no debe ser empleada dicha sierra. **Datos técnicos:** Potencia de desarrollo 90 W. • clase de protección II según VDE 0740 • protegida con capa aislante • protegida contra interferencias • interruptor protector para el motor • peso 1500 g.

La scie à plâtre oscillante est livrée avec deux lames inoxydables de 50 et 65 mm de $\varnothing$ (42-0356 et 42-0357) ainsi que deux clés à écrous pour changer les lames. En accessoire spécial pour plâtres durs (par ex. fibres de verre etc.), 2 lames de scie en acier trempé spécial de 50 et 65 mm de $\varnothing$ (42-0358 et 42-0359) sont disponibles. Ne pas couper de plâtres non rembourrés; en effet, la vibration de la peau collée au plâtre entraîne un risque de blessure de la peau. Pour l'emploi normal, utiliser la petite lame de scie de 50 mm de $\varnothing$. N'utiliser la grande lame de scie de 65 mm de $\varnothing$ que dans les cas exceptionnels (par ex. pour des plâtres épais etc.). L'appareil ne demande pas d'entretien, il doit cependant être vérifié par le fabricant tous les 1 à 2 ans. La scie à plâtre est équipée d'un disjoncteur de sécurité. Ce dernier protège le moteur contre la surcharge. Si la scie disjoncte en raison d'une surcharge, elle peut être remise en service au bout de quelques minutes à l'aide d'un bouton spécial de mise en circuit. Ce bouton de mise en circuit se trouve au-dessous du passage du câble du moteur. Afin d'éviter un trop fort échauffement, nous conseillons de remplacer les lames de scie émoussées et usagées. Pour changer les lames de scie usagées, utiliser exclusivement les clés à écrous livrées avec la scie. Vous éviterez ainsi de fausser le dispositif de serrage. Nettoyer à intervalles réguliers la grille métallique inoxydable de refroidissement. Ne pas utiliser la scie à plâtre dans les zones de danger d'explosion. **Caractéristiques techniques:** puissance absorbée 90 Watt • Catégorie II de protection selon VDE 0740 • Double isolation • Antiparasitée • Disjoncteur-protecteur • Poids 1500 g.

La sega oscillante è corredata con 2 lame in acciaio inox $\varnothing$ 50 e 65 mm. (42-0356 e 42-0357) più 2 chiavi (42-0355) per il cambio delle lame. Quale speciale requisito per bendaggi duri (vetro, fibre, ecc.) sono disponibili 2 lame particolarmente indurite del $\varnothing$ 50 e 65 mm. (42-0358 e 42-0359). Normalmente viene impiegata la lama piccola da 50 mm. La lama grande da 65 mm. viene impiegata in casi eccezionali (gesso spesso, ecc.). L'unità non necessita di manutenzione ma deve essere controllata dalla casa madre ogni 1 o 2 anni. La sega oscillante è munita di interruttore di sicurezza di protezione. Questo protegge il motore dai sovraccarichi. Qualora la sega oscillante fosse inutilizzabile per sovraccarico, l'unità potrà essere rimessa in funzione in pochi minuti attraverso uno speciale bottone situato nella parte inferiore dell'avvolgimento interno. Per prevenire eccessivi surriscaldamenti raccomandiamo di sostituire la lama troppo usata. La sostituzione delle lame deve essere effettuata impiegando esclusivamente le chiavi in dotazione al fine di prevenire sovrappressioni. La griglia di raffreddamento in acciaio inox deve essere pulita ad intervalli regolari. La sega oscillante non deve essere impiegata in aree con pericoli di esplosione. **Dati tecnici:** potenza 90 Watt. • classe di protezione II secondo le norme VDE 0740 • isolamento di protezione • protezione contro le interferenze • interruttore di protezione sul motore • peso 1500 gr.

BESCHREIBUNG

PREP LUBE ist ein Schmiermittel auf Emulsionsbasis, entwickelt speziell zur Schmierung und zum Oberflächenschutz von chirurgischen Instrumenten. Routinemäßige Behandlung der Instrumente mit PREP LUBE nach jedem Reinigungsvorgang verlängert deren Lebensdauer.

Es eignet sich ausgezeichnet zum Lösen von festgefressenen Schlüssen, da es durch seine kriechende Eigenschaft in engste Spalten vordringt.

Das gelieferte Konzentrat wird für den Gebrauch im Verhältnis 1:6 mit Wasser verdünnt. Die Instrumente werden in diese Verdünnung getaucht. Man läßt sie abtropfen ohne nachträgliches Abspülen oder Abwischen.

Die Verdünnung bleibt 2 Wochen lang gebrauchsfähig, verhindert jedes Bakterienwachstum und kann wiederholt verwendet werden. Ein zusätzliches Rostschutzmittel verhindert jede Rostbildung, wenn Instrumente mit PREP LUBE behandelt werden.

FEATURES

- No oily residue
- Extends Instrument Life
- Pleasantly Scented
- Anticorrosive
- Bacteriostatic
- Concentrated

DESCRIPTION

PREP LUBE is an emulsified lubrication oil, formulated specifically to lubricate and protect surgical instruments. Routine lubrication of instruments following each cleaning extends their effective life span.

Excellent for loosening „frozen“ box locks, PREP LUBE penetrates deeply into hinges, keeping all parts moving freely.

The concentrate is diluted one to six parts of water for actual use. Instruments are immersed in to the dilution, and then allowed to drain without rinsing or wiping.

The dilution remains stable for two weeks and, being effectively preserved to prevent bacterial growth, may be reused repeatedly. An added rust inhibition system prevents rust formation on instruments being soaked in the instrument bath.

CARACTERÍSTICAS

- Sin residuos oleosos
- Prolonga la vida útil del instrumento
- Con olor agradable
- Anticorrosivo
- Bacterioestático
- Concentrado

DESCRIPCIÓN

PREP LUBE es una emulsión oleosa lubricante especialmente creada para la lubricación de los instrumentos quirúrgicos y la protección de su superficie. El tratamiento periódico de los mismos con PREP LUBE después de cada limpieza prolonga su vida útil.

Es excelente para aflojar cerraduras atascadas, pues puede penetrar fácilmente en cavidades de difícil acceso.

El concentrado se ha de diluir en abundante agua en una proporción 1:6 para su uso. Los instrumentos se sumergen en la solución. Después se dejan escurrir sin enjuagarlos ni secarlos.

La solución permanece durante dos semanas apta para el uso, evita la formación de bacterias y puede ser usada repetidas veces. Un producto antioxidante adicional evita la oxidación en los productos tratados con PREP LUBE.

CARACTERISTIQUES

- Pas de dépôts huileux
- Augmente la durée de vie des instruments
- Odeur agréable
- Empêche l'oxydation
- Pas de formation de bactéries

DESCRIPTION

PREP LUBE est un lubrifiant à base d'émulsion, mis au point spécialement pour la lubrification et la protection des instruments chirurgicaux. Le traitement de routine des instruments avec PREP LUBE après chaque opération de nettoyage prolonge leur durée de vie.

Il convient parfaitement pour éliminer les corps incrustés; en effet, sa propriété rampante lui permet de pénétrer dans les fentes les plus étroites.

Pour l'utiliser, diluer le concentré livré avec de l'eau à raison de 1:6. Plonger les instruments dans cette solution. Les laisser s'égoutter sans rincer ou sécher au chiffon.

La solution reste utilisable pendant 2 semaines, elle empêche toute croissance bactérienne et peut être utilisée plusieurs fois. Un anti-oxydant supplémentaire empêche toute formation de rouille lorsque les instruments sont traités au PREP LUBE.

CARATTERISITCHE

- Senza residui oleosi
- Prolunga la vita degli strumenti
- Odore gradevole
- Anticorrosivo

DESCRIZIONE

PREP LUBE e' un' emulsione oleosa lubrificante creata per la lubrificazione e la protezione degli strumenti chirurgici. Una lubrificazione di routine degli strumenti dopo la pulizia prolunga la loro vita effettiva.

Eccellente per prevenire blocchi, PREP LUBE penetra profondamente nei cardini, mantenendo le parti libere di muoversi.

Il concentrato va diluito 1 a 6 parti di acqua per impiego normale. Gli strumenti vanno immersi e quindi lasciati ad asciugare senza risciacquare od asciugare.

La soluzione rimane stabile per due settimane, e poiche'evita la formazione di batteri, può essere impiegata ripetutamente. Un additivo antiossidante previene la formazione di ruggine sugli strumenti trattati con PREP LUBE.
